

DOMAIN EXPIRATION PROTECTION SERVICE

1. Domain Expiration Protection ("DEP") is a service that prevents a domain name registered to you from becoming available to other parties for purchase if it is not successfully renewed prior to the expiration of its then-current term. In accordance with the DEP service, the domain name shall not expire and instead you will have one (1) year from the aforementioned then-current date of expiration of the domain name to renew the domain name (the "Expiration Period").
2. During the Expiration Period, the domain name will remain registered to you, but Web.com may (i) lock the domain name and/or (ii) direct the domain name to an IP address designated by Web.com, including, without limitation, to an IP address which hosts a parking, under construction or other page that may include promotions and advertisements for, and links to, a Web.com website and Web.com's products and service offerings, third-party websites, third-party product and service offerings, and/or Internet search engines, unless and until it is renewed by you along with the proper payment. Renewals of domain names during the Expiration Period will be subject to our then-current standard renewal fees. Only the registrant of the domain name will be permitted to renew the domain name during the Expiration Period and must do so over the phone by calling the Web.com Customer Service team. In the event you do not renew the domain name during the Expiration Period, the domain name will automatically be made available to other parties for purchase at the end of the Expiration Period.
